Test Automation Framework

As a User
I want to use the Calculator
So that I can get result
- **Multiply two numbers**

```
package com.guinea.junit.first;  
  
@Test  
public class MyClass {  
    public int multiply(int x, int y) {  
        // the following is just an example  
        if (x > 999) {  
            throw new IllegalArgumentException("X should be less than 1000");  
        }  
        return x / y;  
    }  
}
```
